Family Night

Professional Development

Community Donation Drive

OUR Schools partners with Hot Spots to provide fun and educational programming on the effect of food and waste on our environment. Through 5 different components over the course of a month, students and teachers will learn how to use technology to grow their own food, and engage the school community around sustainable food and waste behaviors.

We provide all necessary supplies, training, and support to ensure your school is fully engaged in environmental learning and your Green School Certification.
